Pierson L

1 Absolute Convergence

10.5

1.1 Good Practice Problems

57

1.2 Ratio Test

The Ratio Test¹ states that

Suppose that $\sum_{n=1}^{\infty} a_n$ is *any* series,
and that

$$\lim_{n \rightarrow \infty} \left| \frac{a_{n+1}}{a_n} \right| = r$$

Then:

The series converges absolutely if $r < 1$

The series diverges if $r > 1$

1.2.1 Examples

example 1

Simplify $\frac{(n+2)!}{(n-1)!}$

Ratio of factorials

$$= \frac{(n+2)!}{(n-1)!}$$

$$= \frac{(n+1)(n+1)(n)(n-1) \cdots (1)}{(n-1)(n-2)(n-3) \cdots (1)}$$

$$= \frac{(n+1)(n+1)(n)(n-1)}{(n-1)}$$

$$= (n+1)(n+1)(n)$$

¹Very important regarding factorials

example 2

Problem 57 from book

$$\sum_{n=1}^{\infty} \frac{2^n (n!)^2}{2n!}$$

We apply the Ratio test

$$\lim_{n \rightarrow \infty} \frac{\frac{(2^{n+1})(n+1)!^2}{2(n+1)!}}{\frac{2^n n!^2}{2n!}}$$

$$\lim_{n \rightarrow \infty} \frac{2^{n+1}(n+1)^2}{2(n+1)} \times \frac{2n!}{2n(n!)^2}$$

$$\lim_{n \rightarrow \infty} \frac{2^{n+1}(n+1)^2}{\mathbf{2n+2}} \times \frac{2n!}{2n(n!)^2}, \text{ note the } +2$$

$$\lim_{n \rightarrow \infty} \frac{2(n+1)^2}{(\mathbf{2n+2})(\mathbf{2n+1})}$$

$$= \frac{1}{2} < 1$$

Hence, the series $\sum_{n=1}^{\infty} \frac{2^n (n!)^2}{2n!}$ converges

1.3 Misc

1.3.1 Factorials

ex.1

$$4! = 4 \times 3! = 4 \times 3 \times 2! = 4 \times 3 \times 2 \times 1! = 4 \times 3 \times 2 \times 1 \times 0!$$

\rightarrow

$$0! = 1$$

\rightarrow

$$4! = 24$$

ex. 2

Simplify $\frac{(n+2)!}{(n-1)!}$

Ratio of factorials

$$= \frac{(n+2)!}{(n-1)!}$$

$$= \frac{(n+1)(n+1)(n)(n-1) \cdots (1)}{(n-1)(n-2)(n-3) \cdots (1)}$$

$$= \frac{(n+1)(n+1)(n)(n-1)}{(n-1)}$$

$$= (n+1)(n+1)(n)$$
